

Aid Data of Countries: Viz - 3

Aid Data of Countries and how they fair among top 5 purposes

Are there any major differences in how the top 5 most frequent purposes of disbursements distribute geographically in terms of countries that receive donations? Are there countries that tend to receive more of certain type of donations than others?

Things to know about this graph :

- We are taking into consideration only the top 25 countries that receive
- If the number of countries is exceedingly more, there would be a lot of pie charts overlapping and makes it difficult to read
- *This graph doesn't show the exact amount of disbursements
- But, this graph would be very easy to compare between countries and also among the top 5 types of disbursements
- Uses geo location as marks to represent countries and colors as channels to distinguish between the top 5 types of disbursements
- We can make this graph interactive, that is adding on: hover, on-click etc to give more insights about the data shown
