

# Aid Data of Countries: Viz - 1

## Aid Data comparison between countries

How do the countries compare in terms of how much they receive and donate from other countries? Are there countries that donate much more than they receive or receive much more than they donate?

Things to know about this graph :

- We are taking into consideration only the top 15 countries that donate
- If the number of countries is exceedingly more, this graph wouldn't be as efficient
- But, this graph would be very easy to compare between countries
- Uses position as marks and colors as channels to distinguish between recieved and donated
- I have taken the log of the amount, which is why it looks better to the eye as compared to not taking log
- Taking log might tend to confuse the user, which is why I have mentioned on the ticks as to whats the exact value on x - axis
